Title: Countercurrent Electrophoresis on Paper. III. Longitudinal Flow of
Liquid Through the Paper with the Current Shut Off

Original
Periodical: Chem. listy, 1956, Vol 50, No 1, 36-42

Abstract: In their investigation of the factors which affect the distribution
of the components separated by countercurrent electrophoresis on paper,
the authors have studied the velocity of flow of liquids along strips
of chromatographic paper, i.e., the so-called "longitudinal flow
velocity" U, for which they confirmed the Kozeny-Karman equation.
The authors have measured the value of U for various slopes and for
different paper strip lengths, taking into account the effect of evapo-
ration. The liquid content of the various paper sections was

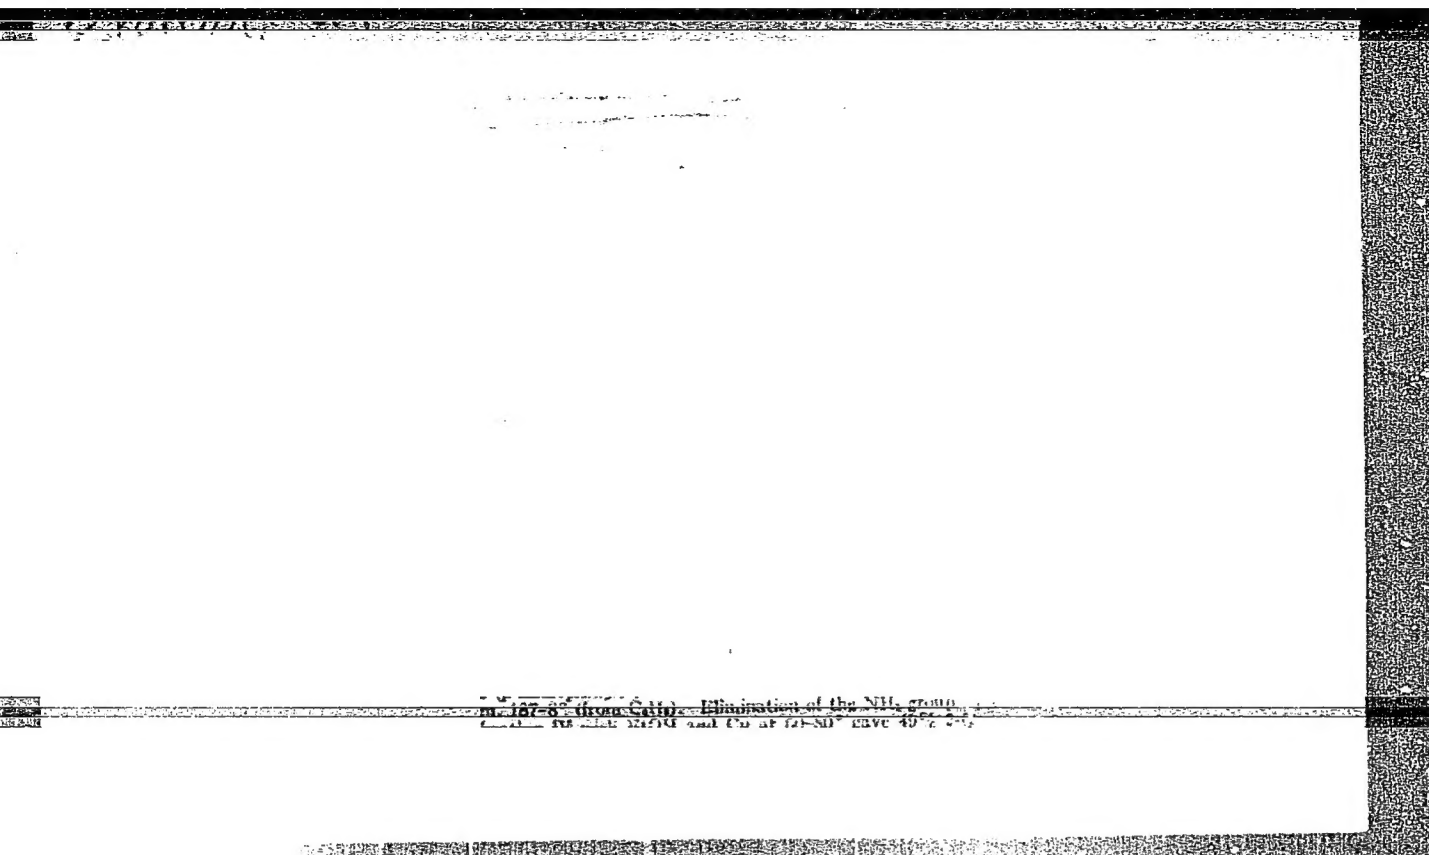

Card 1/2

Czechoslovakia/Physical Chemistry - Surface Phenomena. Adsorption. Chromatography.
Ion Exchange, B-13

Abst Journal: Referat Zhur - Khimiya, No 1, 1957, 595

Abstract: determined by freezing the latter in liquid air and weighing. The linear flow rate at different points on the paper was determined from the displacement of the boundary of radioactive $H_3P^{32}O_4$. It has been established that this flow rate depends mainly on the evaporation. Values for the characteristics of wet and dry Whatman No 4 paper are presented in a table. Among the data included are values for the thickness, total volume, density, porosity, surface area (determined by nitrogen adsorption), the Kozeny constant, and the number and radius of the pores. For communication II see Referat Zhur - Khimiya, 1956, 75470.

AUTHOR: Dvořák, Josef, Medical Doctor

TITLE: The Influence of Cosmic Speeds on an Organism
(Vliv Kosmických Rychlostí na Organismus)

PERIODICAL: Křídla Vlasti, 1959, Nr 9, pp 22, 23 and upper half
of p 24 (CSR)

ABSTRACT: This article is based on a number of Western as well
as Eastern publications. This article contains general
information about the problems which would be
encountered during flights at cosmic speeds. Article
also deals with the biological time and author
states that at the present no theory involving this
subject can be proven true or false. Author also
makes mentioning of ion motors and photon rockets
as means to obtain speeds close to speed of light
necessary for cosmic travel. There is 1 photo.

and Mathematics. Zdeněk Jývstka, Doctor of Natural Sciences, Candidate of Physics and Mathematics, Boris Valařík, Doctor of Natural Sciences and Vladimír Vanysek, Doctor of Natural Sciences, Candidate of Physics and Mathematics. Resp. Ed.: Josef Sedlá.

PURPOSE: This book is intended for the general reader interested in astronomy, celestial mechanics, and astrophysics.

COVERAGE. The book presents in popular language and in summary form the important achievements of science to date in the field of astrophysics, cosmology, and astrophysics, and notes the importance of continuing research in these disciplines for space travel to the moon and in developing space technology to the nearest stars and galaxies. In the section headed "About the Authors" the degrees and titles, affiliations and scientific contributions of each author are given. The text is accompanied by many diagrams, graphs, and tabular data. There are 37 photographs of various celestial bodies. No personalities

Orbis, 1960. 217 p. 20,000 copies printed. (Series: Malá moderní
encyklopedie, sv. 19)

Resp. Ed.: Vladimír Špinka, Engineer

PURPOSE: This popular-style book is intended for the general reader.

COVERAGE: The book is based mainly on Soviet data and presents the physical
aspects of outer space from the biological point of view. Attention is
given to the effect of space factors on the body and methods and equipment
for human flight in outer space are described. Details of the first experi-
ment with the dog Layka in space flight are given. Return to the Earth, the
selection and training of astronauts, scientific results of space flights,

Card 1/4

Title : Quantitative Spectral Analysis of Powder-Like Samples
on Cupped Copper Electrode.
Orig Pub : Chem. Listy, 1956, 50, No 5, 738-742; Sb. Chekhosl.
Khim. Rabot, 1956, 21, No 5, 1155-1160.

Abstract : A method of determination of Si in powder-like raw materials and industrial products was developed. A cupped copper electrode of a 20 mm diameter with a cup 1.5 mm deep was used. The optimum grain size of the analysed materials is 0.15 mm. The analysis results depending on the moisture of samples, it is necessary to dry the substance 2 hours at 100°. Also the chemical form of the element to be analysed influences the determination. The spectra are excited in a condensated spark and photographed on a medium sized quartz spectroscopy. The mean relative error of determination is < 5%.

"Review of Available Foreign Experiences with Steroid Contraception."

Prague, Casopis Lekarů Ceských, Vol 102, No 20, pp 81-91 of separately paginated section "Medical Sciences Abroad" (Lekarska veda v zahraničí.)

Abstract : Excellent review of chemical, pharmacologic and clinical data. Among 16 structural formulae is that of Superlutin Spofa (16- α methylene α dehydro 17- α acetoxyprogesterone) shown without further data; trade names, manufacturers and compositions are given. Tables show comparative results of about 40 large-scale clinical studies 1938-1962 with various contraceptive methods incl chemical mechanical rhythm; breakthrough bleeding incidence; comprehensive discussion. Seven tables; about 100 Western references.

1012. DWARF CELL (ATYPICAL MYELOGENOUS) LEUKAEMIA WITH ACQUIRED HAEMOLYTIC ANAEMIA - Trpasličí leukémie se získanou hemolytickou anémií - Dvořák K. Vnitř. Odd. Nemoc., Tábor - VNITŘ. LÉK. 1957. 3/10 (905-908) Tables

A case is described of a rare combination of dwarf cell leukaemia with acquired haemolytic anaemia in a man of 53 who suffered also from a combined rheumatic disease of the mitral valve and a duodenal ulcer. Haemolytic anaemia was suggested by spherocytosis, persistent reticulocytosis, increased haemolysis, raised blood serum level of indirect bilirubin, and positive direct Coombs test, and an active erythropoiesis in liver and spleen were proved post mortem. The disease took a subacute course. The cytological picture agreed with cases previously described in the literature. An excised axillary lymph node was suspicious of reticulosis. It seems that in this form of atypical myelogenous leukaemia with distinct Pelger's nuclear anomaly of leucocytes there is a more considerable metabolic disturbance of the leucocytes than in the common leukaemias. "Clinical Importance of the Rheumatoid Factor in Old Age."

Prague, Casopis Lekaru Ceskych, Vol 106, No 10, 10 Mar 67, pp 257-263

Abstract [Authors' English summary modified]: Serum rheumatoid factor was examined in subjects above 65 years old by means of the latex-fixation test. In 9.33%, the findings were positive with a diagnostic factor 1:160 or more, while in younger people the findings were only 5.33%. The number of positive findings reaches a maximum at the ages of 70 - 74 years. In 47% of the positive findings other diseases usually combined with rheumatism were found. In 35.7% it was hepatopathies. Higher incidence of the rheumatoid factor in old age is probably due to progressive polyarthritis or another collagenosis. 4 Figures, 3 Tables, 27 Western, 9 Czech references.
